

LCC Problem Preload™

Import your Problems list from your Practice Management system to your Centricity EMR

Now that you've made the decision to implement Centricity EMR, how are you going to move your patient data from your Centricity PM to Centricity EMR?

- Import your patient demographics – Patient ID Number, First Name, Last Name, DOB, Gender, SSN, Address, etc.
- Import your patient diagnosis ICD-9 codes
- Import accurate data without manual data entry errors

Lost Creek Consulting's Problem Preload program allows you to swiftly load your clinical lists data into Centricity EMR. When the provider sees a patient for the first time using Centricity EMR, the Problem Preload encounter form will query your PM system and display that patient's problem list in the form below. The provider can verify the accuracy of the data, which is automatically selected for import, or deselect any data no longer relevant to the patient's history, and with a single click of the import button, the problem data is loaded as a permanent record into the patient's EMR chart.

Import:

Select	Description	ICD9Code	Onset	Resolved	Comments	Type
<input checked="" type="checkbox"/>	AVASCULAR NECROSIS, FEMO...	ICD-733...	11/27/2...		signed by: m...	Dx of
